TECHNICAL BASEBOARDS INFORMATION

Materials

The baseboard of Intelligent Kit is manufactured in MDP (Medium Density Particleboard or Medium Density Particle Board), coated with melamine pellicle, with a standard total of thickness of 1.2 cm, with straight top finish, and their height can varied 5 cm above depends on the works specification.

The MDP, material used in baseboards is developed through technology of intensive continuous press, the modern particle classifiers and complex process of control software, associated with the use of latest generation resins and wood reforestation. So it belongs to a new generation of panels of Medium Density Particle with a high density of surface layers, providing a superior finish in the painting process as well as having mechanical properties that provide better resistance to screw pullout, lower moisture absorption and warpage .

3P KIT INTELIGENTE DO NORDESTE LTDA: CNPJ 13.121.537/0001-51 - INSC. EST. 27.130.370-0 – INSC. MUN. 14-000087
Highway BR 101, KM 118, Lot 3, Industrial District, S/N - Itaporanga D’Ajuda - Sergipe ZIP Code: 49.120-000
